Real Ink. In an Instant

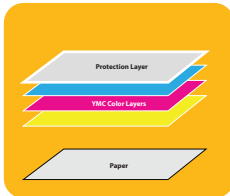

4Pass is a registered brand name of Dye diffusion thermal transfer (D2T2), or Dye Sublimation) technology. It uses 4 timers heat transfer process to distribute the yellow, magenta and cyan color dyes onto photo paper in a continuous tone and to laminate protection layer at the last. It is the closest technology for printing real photo among the existing technologies to print photo.

Incomparable Image Quality

4Pass has much wider color reproduction range by using full temperature control range (0-300C) of TPH (Thermal Printing Head). The result is high-quality and vivid photographic output with 256 levels per color (total 16.7 million colors). Due to its excellence in image quality, 4Pass makes bigger size photo printer such as 4"X", 6"X10".

Long Lasting Image Preservation

Protection Layer

Water Proof

Finger Print Proof

4Pass has last process to laminate protection layer after 3 colors dyes (Yellow, magenta, cyan) distribution. The result is water proof, finger-print proof photo with long lasting image quality. You can tough the image right after printing.

All in one Cartridge

It is the patented cartridge which makes 4Pass products pocket sized instant cameras and printers. It has real ink ribbon and photo paper in one cartridge . It makes no copy product possible, no cleaning paper needed. no reverse insert possible either.
